

To whom it may concern:

I am writing to you to oppose the use of molting, forcing chickens to go as long as two weeks without eating so they can increase the production of eggs. This often causes and increases the severity of salmonella poisoning, something that the FDA says it wants to halt. The practice of molting should be immediately banned by the FDA, which would be much more humane and decrease the frequency and severity of salmonella. Thanks for your time.

Yours truly,

Jerome Mc Collom
